BUSTINE

Vitamin C and Zinc

THE HUMAN MICROBIOME

If we could count the different types of cells which make up the human body, we would discover that, in the face of 10 trillion human cells, our body contains about 10 times as many (100 trillion) bacterial cells, largely localized in the digestive tract. In an adult weighing 70 kg, these bacteria weigh approximately up to 1,6 kg, i.e. nearly as much as the brain or liver. The set of these bacteria is defined as "human microbiome" and represents the complex of microorganisms that physiologically live in symbiosis with our body and are also fundamental for our survival.

THE INTESTINAL MICROBIOME

The intestinal bacterial flora, also known as "intestinal microbiome", is the set of bacteria that live in the human intestine. Each part of the intestine is colonised by specific classes of these bacteria.

The **functions performed by the intestinal microbiome** are numerous:

- **metabolic** (producing vitamins, anti-inflammatory immunoglobulins and other useful substances)
- **protective** (defending the mucosa from the proliferation of pathogenic species)
- **structural** (optimising the function of the colon and the decrease of the faecal pH)

In physiological conditions a dynamic balance exists among the various species of bacteria, but certain factors can alter it.

In the presence of such alterations, **it is helpful to take probiotics** (lactic ferments), constituted by microorganisms which reach the intestine alive, colonise it and prevent the proliferation of other potentially harmful bacterial species.

A balanced combination of probiotics, studied to colonize the whole digestive tract and administered at a high concentration, has a greater chance of reaching this aim.

FLORMIDABIL IMMUNO

Flormidabil Immuno is a food supplement developed in a **Unique and Exclusive Formula** of probiotics (lactic ferments); for a complete action, it contains **70 billion** live microorganisms, in **4 different strains, clinically tested**, belonging to the groups of Lactobacilli and Bifidobacteria.

These groups colonise the following parts of the intestine:

- **Lactobacilli**, mainly found in the small intestine (the first part of the intestine). It is also known as "small intestine".

• **Bifidobacteria**, mainly found in the colon, which is part of the large intestine (it is the second and last part of the intestine). The latter is also known as "large intestine".

Flormidabil Immuno is a food supplement based on probiotics that favour the balance of the intestinal flora.

The changes of seasons, intense cold, stress caused by frenetic rhythms, intense work with insufficient rest and an altered intestinal bacterial flora can weaken the immune system. In the case of an altered intestinal bacterial flora it is useful to assume a specific dietary supplement based on live lactic ferments.

Flormidabil Immuno also contains Vitamin C and Zinc. Vitamin C and Zinc contribute to the normal function of the immune system. **Flormidabil Immuno** can be used in a continuous manner or in treatment cycles, even for extended periods of time.

INSTRUCTIONS FOR USE

Take one sachet per day, by letting it dissolve directly in your mouth or diluting it in a glass of water or of another liquid that is not hot. Take the product at a convenient time of the day (for example: just before or just after a meal) while observing an interval of at least three hours after any antibiotic intake.

Flormidabil Immuno is a gluten-free and lactose-free product. It also does not contain soy, GMOs, aspartame, acesulfame, added flavours and is compatible with a vegetarian and vegan diet. **Flormidabil Immuno can be taken by pregnant or breast-feeding women after they have consulted their doctor.**

WARNINGS

Do not exceed the recommended daily dose. Food supplements are not intended as a substitute for a varied and well-balanced diet and a healthy lifestyle. Keep out of the reach of children under three years of age. This product is not indicated for children and adolescents. This product contains polyols: an excessive consumption may have laxative effects.

STORAGE CONDITIONS

Store at a temperature lower than 25°C; avoid exposure to localised heat sources, to solar rays and store in a dry place. The expiry date refers to the correctly stored product with its packaging intact.

Nutritional information	Per daily dose (1 sachet)	NRV%
Flormidabil Sandoz Formula of which:	70 billion CFU	-
<i>Bifidobacterium lactis</i> (BL-04)	52.5 billion CFU	
<i>Lactobacillus acidophilus</i> (LA-14)	14 billion CFU	
<i>Lactobacillus plantarum</i> (SDZ-11)	2.8 billion CFU	
<i>Lactobacillus paracasei</i> (SDZ-22)	0.7 billion CFU	
Vitamine C	24 mg	30%
Zinc	10 mg	100%
